

TECHNICAL NOTES

Wagg & Purr® Digestive Care

Description

Wagg & Purr® Digestive Care provides prebiotic and probiotic support for digestive function.

Wagg & Purr® Digestive Care for Dogs and Cats provides eight strains of healthy bacteria and short-chain fructooligosaccharides, which have prebiotic activity. Together these components help to normalise gastrointestinal function. At times of stress, after treatment with antibiotics or after gastrointestinal infections, Wagg & Purr® Digestive Care for Dogs and Cats may help return digestive capacity to normal.

Like people, pets can often become stressed by changes in circumstances, environment and household balance. During minor periods of stress, inappetence and anxiety, pets may benefit from probiotic supplementation, however, signs of gastrointestinal upset, weight loss, behavioural disorders or changes to toileting habits may indicate serious underlying disease. Such abnormalities should lead owners to promptly seek veterinary advice.

Ingredients

Each capsule contains approximately 2×10^9 CFU of probiotic bacteria.

- *Bifidobacterium animalis lactis*
- *B. bifidum*
- *Lactobacillus acidophilus*
- *L. brevis*
- *L. casei*
- *L. delbrueckii bulgaricus*
- *L. plantarum*
- *Streptococcus thermophilus*

Each capsule contains 500 mg of probiotic mix (96% fructo-oligosaccharides, 4% probiotic bacteria).

This product also contains calcium stearate feed, magnesium stearate feed, and maltodextrin.

Precautions

Supplementation of pets should not be used as a replacement for normal veterinary care and balanced diets.

Daily Amounts

Discuss the suitability of this product with your veterinary care team. The following table shows indicative amounts to feed your pet daily. Your veterinary team may advise you to feed higher initial amounts or feed twice daily at times of stress.

Cats and Kittens	1 capsule
Dogs up to 10 kg	1 capsule
Dogs 10 to 20 kg	2 capsules
Dogs 20 to 30 kg	3 capsules
Dogs 30 to 40 kg	4 capsules

Capsules can be easily opened, and the contents sprinkled onto wet food. If capsules are fed directly to pets, it is advisable to give the pet water immediately afterwards. Encouraging drinking or flushing the mouth with a syringe will ensure that capsules travel promptly to the stomach.

Presentation

30 Capsules in blister packs

Storage & Handling Instructions

Store below 30 °C out of sunlight. Protect from moisture. The blister pack protects the product from moisture and humidity. Keep capsules sealed until ready to use.
